VI. RECOVERY OF THE VICTIMS' BODIES AT OLEN BURRAGE'S DAM ON AUGUST 4, 1964

275

50-2 48

FEDERAL BUREAU OF INVESTIGATION

Date August 10, 1964

1

On August 4, 1964, at 8:12 a.m. CST, SA accompanied by SA served a search warrant upon Mr. OLEN BURRAGE, Route 9, Philadelphia, Mississippi. Specifically, this search warrant was served upon him at his place of business, the "Olen Burrage Truck Company" located on Mississippi State Highway 21 approximately 1½ miles east of the Williamsville community. Mr. BURRAGE identified himself through miscellaneous personal identification cards in fraternal organizations issued in his name. He advised that he was the owner and was in control of the area known locally as the "Old Jolly Farm".

A copy of the search warrant was presented to him at that time.

The search warrant so served is described as being in the U. S. District Court for the Southern Judicial District of Mississippi, Biloxi Division, Commissioner's Docket #1, Case #70, styled United States of America versus Unknown Occupants of the "Old Jolly Farm". This search warrant was dated August 3, 1964, and signed by VERTA LEE SWETMAN, U. S. Commissioner.

On the morning of August 8, 1964, at approximately 11:00 a.m. an "inventory of property seized under search warrant issued August 3, 1964, by the U. S. District Court, Southern Judicial District of Mississippi, Biloxi Division, Commissioner's Docket #1, Case #70, styled United States of America versus Unknown Occupants, Old Jolly Farm", was delivered to Mr. OLEN BURRAGE at his place of business. The place of business is described as the OLEN BURRAGE Truck Company located approximately 12 miles west of the Williams-ville community on Mississippi State Highway 21.

The inventory of items removed under this search warrant are listed as follows:

Three human bodies

Accompanying clothing

Soil samples

One expended cartridge case

in the presence of SA and the signed instrument was so delivered to Mr. BURRAGE. 67C

At the same time, Mr. BURRAGE executed a receipt on a carbon copy of this inventory acknowledging receipt of the inventory.

This document contains neither recommendations nor complements of the FBI. It is the property of the FBI and is loaned to your agency; it and its contents are not to be distributed outside your agency.

Date August 13, 1964

At approximately 11:59 a.m. on August 10, 1964, the search warrant previously issued by the United States Commissioner, Biloxi, Mississippi, was executed and returned to that Commissioner.

August 12, 1964

The following information represents a joint investigation conducted by the following Special Agents under the supervision of SAs and and the following special Agents under the FBI Laboratory: hyc

I. ENTRY OF DAM SITE

At 8:15 a.m., August 4, 1964, upon notification of service of a search warrant to property owner OLEN BURRAGE, Route 9, Box 202, Highway 21, south of Philadelphia, Mississippi, the heavy earth-moving equipment brought from Jackson, Mississippi, began moving into the dam site located on Mr. BURRAGE's property. A small dirt access road winding west from Highway 21 approximately six miles southwest of Philadelphia was utilized to move this equipment into place. It was ascertained to be the most suitable access based upon a helicopter overflight and the study of previously obtained U. S. Navy aerial photographs of Neshoba County.

The earthen dam of concern in this investigation is situated on the property known as the "Old Jolly Farm" and is under the control of OLEN BURRAGE. This property is further described as being located within Section 6 of Block R 11E as set out on the Edgar Tobin Aerial Survey Map #Q8177 of the north half of Neshoba County, Mississippi. This section is fixed by the map coordinates of 89° 11.75" to 89° 12.75" west and 32° 44.25" to 32° 45.25" north.

The heavy construction equipment to be utilized in the excavation of this earthen dam consisted of a Link-Belt Dragline,

Model LS68, with a 36-foot boom and a Caterpillar Bulldozer, Model D6B, with a 10-foot blade. The supervising contractor at the site representing the Hyde Construction Company of Jackson, Mississippi, was

Mississippi. The dragline operator was

Mississippi.

Mississippi. A second bulldozer operator was Mississippi, and a second dragline operator was also brought to the scene late on the evening of August 4, 1964,

by the Hyde Construction Company for this particular operation.

was likewise hired for this specific job by Hyde. 670

II. DETERMINATION OF EXCAVATION POINT

Upon evaluation based on the physical characteristics of the dam, a point approximately 150 feet from the west end of the dam was selected as the initial point of digging. The bulldozer operator, was then instructed at 9 a.m. to begin to "blade off" the top of the dam to increase the width to approximately 12 feet and thereby permit the dragline to be placed on top of the dam for future operations. Upon positioning of the dragline, digging was begun at the point in the dam described above. b79

III. OBSERVATIONS PRIOR TO BEGINNING OF EXCAVATION

The dam in which the bodies of the three missing civil rights workers were believed to be buried was an earthen structure stretching from one hill to a second parallel hill in a circular manner running in a generally east-west direction. The dam had been constructed of earth removed from

487

50-8

the sides of these hills. It measured approximately 547 feet in length, that is, from the points of intersection of the dam and hills. At its highest point from the valley lying between the hills it measured approximately 20 feet. At this point, the widest point of the base of the dam, the base measured approximately 83 feet in width.

Prior to beginning excavation, SA was assigned the responsibility of photographing the site to record the condition of the dam and surrounding areas at the time of entry into the area. blue

SA was assigned to record the various observations of the personnel engaged in the digging operation and to maintain a log of the activities of these personnel.

SA was assigned to the mapping and charting of the dam and surrounding areas and SA was assigned to the responsibility of collecting and preserving whatever items of evidence might be uncovered during the excavation process. BC

IV. OBSERVATIONS DURING EXCAVATION AT DAM SITE

The excavation at the point selected began initially with the use of the bulldozer opening a small pit to permit the dragline bucket to begin to remove earth from the dam. After approximately two hours of excavating, faint traces of the odor of decaying organic material were noticeable. At this time the dragline operator was instructed to proceed with the excavating operation exercising extreme caution. The Agents assigned to the excavation project maintained close supervision and constant surveillance of the excavation pit. The earth being moved was closely observed as it was loaded and unloaded from the dragline bucket.

At approximately 2:50 p.m. the pungent odor of decaying flesh was clearly discernible. At that time the dragline operator was instructed to cease his operation. Agents then

50-9

entered the pit and a careful scrutiny was made of the bottom of the pit which had thus far been opened up. It was noted a number of blow-flies had accumulated in the pit. The bulldozer operator was instructed to make several light passes over the area. Following each of these passes the ground cleared was reinspected and on the third such pass it was noted that the activity of the blow-flies had measurably increased. At this time, 3 p.m., the heels and back portions of a pair of man's boots were observed. As the stench permeated the area it was also noted that approximately one-quarter mile from the excavation site numerous vultures or buzzards were observed reconnoitering.

A meticulous removal of the earth surrounding the boots revealed, at 3:18 p.m., the outline of a human body. The removal of the impacted clay-like earth was continued and approximately two hours later Body #1, that of an individual clad in trousers and boots and naked from the waist up, was uncovered.

The body was lying face down with the head pointing in an easterly direction, arms extending over its head. On the ring finger of the left hand a ring consisting of two irregular bands joined together at intervals by cross bars was observed. The appearance of this ring and the general physical description of this body were consistent with available descriptive data concerning MICHAEL HENRY SCHWERNER.

The hands of this body were encased in plastic bags for purposes of preservation. The boots were observed to be the pull-on type (Wellington style). The bluejeans on the body bore a "Wrangler" label above the right hip pocket. These items of clothing were likewise consistent with previously obtained descriptive data of clothing worn by 6CHWERNER.

In the left hip pocket of the bluejeans was found a black leather wallet. This wallet contained among other

283

items a Selective Service card bearing the following data:

Name: MICHAEL HENRY SCHWERNER

Address: 34 Fifth Street, Pelham, New York

Date of Birth: November 6, 1939
Date of Registration: November 8, 1957
Selective Service Number: 30-10-39-1172

The body was not moved or disturbed in any way in order to preserve the scene. It was noted during the observation of Body #1 that there appeared to be a small wound under the left armpit area. This wound was suggestive of a possible bullet wound.

Exhuming operations continued and at 5:07 p.m. the body of a second individual lying in a face-down position south of and adjacent to Body #1 was located. This body, Body #2, was partially under Body #1. The head of Body #2 was likewise pointed in an easterly direction with arms generally extended over its head. The left hand of this body was clenched in a tight fist. Opening of this fist disclosed a rock-like object. Body #2 was clad in trousers and shoes and naked from the waist up.

No jewelry was noted on the hands of Body #2. These hands were likewise encased in plastic bags for preservation. In the right hip pocket of the trousers of Body #2 was a black leather wallet which contained among other items a Selective Service card bearing the following descriptive data:

Name: ANDREW GOODMAN

Address: 161 West 86th Street

New York 24, New York

Date of Birth: November 23, 1943
Date of Registration: November 24, 1961

Selective Service Number: 50-13-43-458 (possibly 488)

What appeared to be a shirt was observed to be wadded beneath the hips of Body #2. Body #2 was not moved or $\frac{1}{1}$

284

50-11

disturbed in any way in order to preserve the scene.

At 5:14 p.m. the remains of a third body were unearthed. Body #3 was lying on its back immediately south of and parallel to Body #2. The head was toward the west with the face turned south. The left arm and shoulder were drawn up and across the body. The right arm was lying along the side of the body. Body #3 was barefoot and clad in trousers and a "T" shirt. No jewelry was observed on the hands of Body #3. Since this body was lying on its back, no attempts were made at this time to move it to determine any contents of the trousers' hip pockets. The hands and feet of this body were encased in plastic bags for preservation.

Exhuming operations were continued in order to expose as much of the bodies as possible without disturbing them in order to facilitate the coroner's examination.

During the course of exhumation, photographs were made at various stages by SA

It is estimated that approximately 27,000 cubic feet of earth were removed in the exhumation of these three bodies.

V. ARRIVAL OF CORONER AND OTHER NESHOBA COUNTY OFFICIALS

Shortly after 8 p.m., FULTON JACKSON, Neshoba County Coroner, appeared at the scene accompanied by Deputy Sheriff CECIL PRICE, Neshoba County Sheriff's Office, and Neshoba County Attorney RAYFORD JONES. Upon completion of the coroner's examination at 8:36 p.m. these officials departed from the scene.

Subsequently the bodies were placed in large plastic body bags and sealed by Coroner JACKSON for transportation to Jackson, Mississippi, where they were to undergo autopsy examinations at the University of Mississippi Medical Center.

FEDERAL BUREAU OF INVESTIGATION

.	August	12,	1964
Date			

The following information is the result of a joint investigation conducted by the following Special Agents:

On August 5, 1964, the search of the earthen dam located on the Old Jolly Farm, that portion of which is now the property of OLEN BURRAGE, was continued. The soil in the area directly beneath the grave site within this dam, from which the three victims' bodies had been removed on August 4, 1964, was minutely sifted through a wire screen to a depth of approximately three feet. No significant items of an evidentiary nature were located as a result of this effort.

In addition, the area completely surrounding the grave site pit up to a radius of approximately 15 feet from the grave center and to a depth extending the level of the original burial pit was sifted and closely examined. Similarly no items of an evidentiary nature were located as a result of this search.

A detailed terrain search of the clearing in which the earthen dam is located was conducted without recovering any significant items of evidence.

FEDERAL BUREAU OF INVESTIGATION

Date August 12, 1964

On August 5, 1964, certain pertinent measurements were recorded of the area in which the earthen dam on the "Old Jolly Farm" is located. This dam is the one in which the bodies of the victims were located on August 4, 1964. They were obtained by SAs

17C

Overall length from end of dam construction on west to similar position on east - 547 feet

Approximate width of dam at base - 83 feet, 6 inches

Approximate width of dam at top - 11 feet

Approximate height of dam - 20 feet

Distance across entire excavation area from east to west - 58 feet, 6 inches

Distance from east edge of excavation to west edge of vertical cut = 39 feet

Distance from center of grave site pit to end of dam construction on east .- 356 feet

Distance from center of grave site pit to end of dam construction on west - 191 feet

Distance from center of grave site pit to south edge of dam - 42 feet

Distance from center of grave site pit to north edge of dam - 41 feet, 6 inches

Grave site pit located 14 feet, 11 inches below top of dam:

Length of grave site pit east to west - 7 feet, 6 inches

Width of grave site pit north to south - 6 feet, 9 inches

Distance from eastern edge of grave site pit to top
eastern edge of excavation - 27 feet

Distance from western edge of grave site pit to top western edge of excavation - 38 feet

Distance from western edge of grave site pit to top vertical cut western edge - 15 feet

Distance from grave site location to north end of drainage pipe - 98 feet, 3 inches (Bearing 44° northwest)

Distance from grave site location to south end of drainage pipe - 116 feet, 10 inches

There are attached three sketches, based upon the above measurements, depicting the general area of this dam.

conservation practices.

FEDERAL BUREAU OF INVESTIGATION

Date ___ August 10, 1964

1

Soil Conservation Service, U. S. Department of Agriculture, County Building, Philadelphia, Mississippi, stated he gave Mr. OLEN BURRAGEinformal advice and some service in the construction of a private dam for a lake situated about six miles southwest of Philadelphia on some of BURRAGE's property. to some pencil notes and advised he first visited the area of the dam on May 25, 1964, at which time no construction or land clearing had begun. On this occasion at the request of Mr. BURRAGE set up an instrument and ran a water line on the east side of the proposed lake for 15 feet of water. Mr. HERMAN TUCKER, who later constructed the dam, carried the Irod for was then clearing the lake area of trees and underbrush. At this time understood Mr. BURRAGE wanted an agreement with the U. S. Department of Agriculture, whereby the U. S. Government would share the cost of the dam in exchange for certain soil

was next at the site on July 15, 1964, when he was asked by Mr. TECKER to visit the area to give advice.—
On this occasion found that the dam was almost completed and was perhaps a hundred yards further north down the creek than where it had been planned while he was previously in the area. On this visit, he found that the dam was about 12 feet high and walked along the top of the dam and saw the drain pipe in the old creek bed which was too short and was almost even with the dam surface. At this time a Mr. PETTIS was operating a bulldozer pushing dirt up the sides of the dam.

On July 17, 1964, and again drove by the dam, looked again at the drain pipe, and then drove to the BURRAGE Garage, where he advised BUERAGE to extend the pipe several feet inside the lake. When was at the dam on July 17, 1964, a was there operating a bulldozer and the surface of the dam appeared very rough.

On July 22, 1964, drove by the BURRAGE Garage where stopped him and asked him to go out and set up

this instruments to see if the "free board" was high enough. By this he meant whether the portion of the dam other than the spillway was the prescribed height of 15 per cent of the dam. He explained that in this case the free board should be about 2 feet, which is something like 15 per cent of the total height of the dam of 17 feet. The free board is that portion of the dam that is higher than the spillway. Spent about 30 minutes there this time and found that the free board was not high enough. Was working at the site at this time. The lake as he had previously advised. 600

He said he heard nothing in conversations with the abovenamed persons and saw nothing in his visits to the area, which causes him to suspect those persons had knowledge there were bodies buried in the dam.

50-42

Date August 10, 1964

<u>1</u>

Conservation Service, U. S. Department of Agriculture, County Building, Philadelphia, Mississippi, who works in Neshoba County, advised the U.S. Department of Agriculture has a program whereby an agreement is entered into with farmers, under which agreement the U. S. Government shares in the costs of the construction of lakes and ponds on the property of the various farms as a conservation project. To qualify for this assistance, the construction of the dam and the clearing and treatment of the water area, must meet certain standards. About one year ago OLEN BURRAGE to initiate such an agreement in the concentacted struction of the dam. At that time wisited the area of the proposed dam and found that no construction had begun and it was merely a wooded area. Mr. BURRAGE made no further effort to have the agreement formulated although the dam was constructed with completely private funds by Mr. idid not visit the dam area a second time and BURRAGE. stated he had no further information, but office gave informal advice to Mr. BURRAGE in the construction of the dam. 67C

Referring to the construction of the levee on the Old Jolly Farm owned by OLEN BURRAGE, from time to time he observed two caterpillar tractors working on that site. One was described as an old caterpillar tractor and the other was described as a new caterpillar tractor. He was unable to fix the period when these pieces of equipment together or separately had been used at the construction site.

was under the impression that in the construction of the dike dynamite had been used to construct the core of the dike and the piece of equipment he referred to as an "earth hauler" had also been used. He could recall no hand tools in the form of shovels at the site but expressed the opinion that they undoubtedly were present at the levee construction site.

He could recall no equipment being used at the construction in that vicinity that was capable of boring holes in the ground of any diameter.

VII. AUTOPSIES OF CHANEY, GOODMAN AND SCHWERNER AT UNIVERSITY OF MISSISSIPPI MEDICAL CENTER, JACKSON, MISSISSIPPI

377

50-90

FEDERAL BUREAU OF INVESTIGATION

Date August 12, 1964

1

The autopsies of the three bodies removed from the earthen dam on the property of OLEN BURRAGE near Philadelphia, Mississippi, by Agents of the FBI on August 4, 1964, were conducted at the University of Mississippi Medical Center at Jackson, Mississippi, on the morning of August 5, 1964, by Dr. WILLIAM PRESTON FEATHERSTON, a private practicing pathologist of Jackson, Mississippi. Present as witnesses at the autopsies were the following individuals:

SA JAY COCHRAN, JR., FBI Laboratory FBI Laboratory SA FBI, Jackson, Mississippi SA FBI, Charlotte, North Carolina SA LAWRENCE M. SHEARER, JR., FBI, New Orleans, Louisiana FULTON JACKSON, Neshoba County Coroner b1C Sheriff LAWRENCE RAINEY, Neshoba County Deputy Sheriff CECIL PRICE. Neshoba County Dr. WOEL G. BRUNSON, Professor of Pathology, University of Mississippi Medical School Assistant Professor of Pathology, University of Mississippi Medical School. Assistant Professor of Pathology, University of Mississippi Medical School Photographer, Mississippi Highway Safety Patrol

I. AUTOPSY OF BODY NUMBER ONE

The autopsy of the first body commenced at 1:35 a.m., at which time the primary procedure was total body X-ray. Upon breaking the seal and opening the bag in which the remains had been placed, photographs were taken of the remains by SA Additional photographs were taken at various stages during this autopsy. b7C

50-91

Body #1 was determined to be that of a white male clad in blue denim trousers and Wellington-style boots. A ring set consisting of two irregular bands joined together at intervals by bars was removed from the left ring finger of the body by Dr. FEATHERSTON. The appearance of this ring was consistent with the descriptive data avilable concerning the wedding ring belonging to MICHAEL HENRY SCHWERNER. This ring was placed in a container for subsequent transmittal to the FBI Laboratory for development of any inscriptions thereon. Present in the right front pocket of the trousers on this body was a cigarette lighter which was similar to the lighter described in descriptive data of the belongings of SCHWERNER. The clothing, head hair samples, and personal effects of SCHWERNER were obtained and preserved for subsequent transmittal to FBI Laboratory.

Dr. REUEL MAY, JR., D.D.S., Jackson, Mississippi, performed a dental examination of Body #1. This examination consisted of recording of the existing dentition in the skull and lower jaw of Body #1.

Upon completion of this dental examination, Dr. FEATHERSTON removed the terminal phalanges of each hand and turned them over in order to SA SHEARER for preservation and subsequent examination for any ridge detail present which might make possible fingerprint identification of Body #1 by the Latent Fingerprint Section of the Identification Division of the FBI. Because of the advanced stage of decomposition of all three bodies, it was not possible to obtain during the autopsies inked impressions of the fingers of these bodies. Upon removal of the shoes and socks of Body #1 the skin comprising the bottoms of the feet sloughed off. This skin was retained for possible identification purposes.

Dr. FEATHERSTON advised that Body #1 was that of a white male in an advanced stage of decomposition measuring 70½" in length. He stated death was not from natural causes and that death was the result of a bullet wound. A section

50-92 5

of tissue was removed from the left chest area and was preserved for subsequent powder residue examinations. A bullet was removed from the left lung cavity and directly placed in a suitable container for preservation after having first been marked for identification on its base by Dr. FEATHERSTON. The removal of this bullet required a median incision on the ventral surface of the body and removal of the rib cage. A detailed examination of the body and body X-rays did not reveal the presence of any other bullets. The examination of Body #1 was terminated at approximately 2:30 a.m.

II. AUTOPSY OF BODY NUMBER TWO

During the autopsy of Body #1, Body #2 was afforded detailed X-ray examination by hospital personnel. It was likewise photographed by SA prior to and during autopsy. The autopsy of Body #2 commenced at approximately 2:40 a.m. A similar procedure was then followed by Dr. REUEL MAY, JR. in making his dental examinations of Body #2 as that procedure employed by him with Body #1. Dr. MAY's examination commenced immediately following the breaking of the seal on Body Bag #2 and opening of the bag by Dr. FEATHERSTON. 670

The terminal phalanges of each hand of Body #2 were removed and preserved as in the case of Body #1. Similarly the skin tissue from the bottoms of the feet, which had come off during removal of the shoes and socks of Body #2, was preserved for possible identification purposes.

Dr. FEATHERSTON advised that Body #2 was that of a white male in an advanced stage of decomposition and that this body measured 69½" in length. Body #2 was clothed in a pair of dark trousers, blue socks and Oxford-type shoes. A dark-colored shirt was removed from the body bag which contained Body #2. This shirt had previously been located at the grave site lying under the hips of Body #2. The clothing,

50-93

head hair samples and personal effects of Body #2 were preserved for transmittal to FBI Laboratory.

Dr. FEATHERSTON advised that death was not from natural causes and that a bullet wound was present in the right chest area of this body. A section of skin tissue was removed from this area and preserved for examination of any gun powder residue. A bullet was removed from the thoracic area near the vertebral column of Body #2. This bullet was placed directly in a container and preserved for subsequent FBI Laboratory examination after having been first marked on its base by Dr. FEATHERSTON. An examination of Body #2 and a careful review of body X-rays did not reveal the presence of any other bullets. The examination of Body #2 was terminated at approximately 3:26 a.m.

III. AUTOPSY OF BODY NUMBER THREE

During the autopsy of Body #2, Body #3 was afforded detailed X-rays by hospital personnel. Body #3 was also photographed by SA prior to and during autopsy. The autopsy of Body #3 commenced approximately 3:27 a.m. A procedure similar to that employed in the dental examinations of Bodies #1 and #2 was utilized in the examination of Body #3 by Dr. REUEL MAY, JR. Dr. MAY's examination commenced immediately following the breaking of the seal on Body Bag #3 and the opening of the bag by Dr. FEATHERSTON. 67C

The terminal phalanges of each hand were removed and preserved for possible fingerprint identification. In addition, the skin tissue from the bottoms of the feet of Body #3 were also preserved for possible identification purposes.

Dr. FEATHERSTON advised that Body #3 was that of a Negro male in an advanced stage of decomposition and that this body measured 69" in length. Body #3 was clad in a pair of dark green trousers, "T" shirt and undershorts. No type of footwear was present on Body #3. No items of personal identification were located in the clothing of Body #3. This clothing was removed and preserved for examination by the FBI Laboratory. Head hair samples were removed for subsequent FBI Laboratory

1

50-94 573

examination.

He said that death was not from natural causes and that three bullets were present in this body. Dr. FEATHER-STON advised that death most likely occurred as a result of the bullet wound of the head. A bullet was removed from the anterior abdominal wall of Body #3. A second bullet was removed from the center of the back of Body #3 and a third bullet was removed from the brain substance in the cranium of Body #3. Each of these three bullets was placed directly in a container by Dr. FEATHERSTON after having first marked their bases for identification purposes. Skin tissue from the upper left epigastrium was removed and preserved for gun powder residue examination. Autopsy of Body #3 was terminated at approximately 4:15 a.m. 6701

IV. DENTAL IDENTIFICATIONS OF BODIES

Dr. MAY, after completing his dental charting of Bodies #1 and #2, compared these charts with dental records previously obtained for victims SCHWERNER and GOODMAN. These charts were made available to him by SA COCHRAN.

As a result of Dr. MAY's comparisons, he advised that in his professional opinion the existing dentition in the skull and lower jaw of Body #1 conforms to that of the dental record of victim SCHWERNER and that the existing dentition in the skull and lower jaw of Body #2 conforms to that of the dental record furnished for victim GOODMAN. Based upon these. comparisons, Dr. MAY was of the professional opinion that Body #1 was that of MICHAEL HENRY SCHWERNER and Body #2 was that of ANDREW GOODMAN.

No facts were developed during the autopsy of Budy #3 which would permit identification of this body. No dental record has been located for victim CHANEY; however, it was noted that the general physical description and the clothing on Body #3 conformed closely to the previously obtained descriptive data for victim CHANEY.

50-95 574

 C_{ij}

Dr. MAY's original dental charts of Bodies #1, #2 and #3 are being retained by the FBI for possible future use as evidence in this case. At the request of Dr. FEATHERSTON copies of these charts have been provided to him for completion of his records on these autopsies.

FEDERAL BUREAU OF INVESTIGATION

Date _____August 12, 1964

1

Dr. WILLIAM PRESION FEATHERSTON, Pathologist, advised following his autopsies of the bodies removed from the earthen dam near Philadelphia, Mississippi, on August 4, 1964, that in his professional opinion death to each of the bodies was due to gunshot wound. In the case of Bodies #1 and #2, gunshot wounds to the chest were the causes of death. In the case of Body #3, which suffered three gunshot wounds, it was Dr. FEATHERSTON's professional opinion that death was due to the gunshot wound to the head of this body. Dr. FEATHERSTON could not establish the sequence of the three gunshot wounds of Body #3 and, in addition, could not establish the positions of any of the three bodies at the time of the gunshot wounds. Dr. FEATHERSTON stated that these determinations were precluded by the condition of the bodies.

he is required and permitted to file only two official copies of these autopsy reports. One copy is to go to the court of jurisdiction and the second copy to the County Attorney of jurisdiction. He stated, however, that he knew of no rule or regulation which would preclude his providing the FBI with an unsigned copy of his autopsy report recognizing that should an official copy be necessary in subsequent court action, the

This document contains Bei	ther recommendations nor conclusions of the FBI. It is the property of the FBI and is loaned to ents are not to be distributed outside your egency.

(Items Relating to Body Number Three continued)

Item 15 - Skin removed from bottoms of feet.

Item 16 - Clothing removed from body including wallet.

Item 17 - Skin section from area surrounding hole in chest area, Body Number Three.

Item 18 - Bullet removed from center back of Body Number Three.

Item 19 - Bullet removed from anterior abdominal wall.

Item 20 - Bullet removed from head.

The packages containing these items were turned over to SA FREDERICK A. COOK for hand carrying to the FBI Laboratory at 7 a.m. on August 5, 1964.

In addition, contained in these packages were three 4 x 5 Tri-X exposed film packs, two rolls of Kodacolor-X 35 millimeter exposed film and one roll of Kodak Plus-X 35 millimeter exposed film for development by the Photographic Laboratory of the FBI in Washington, D. C.
